Overview

Shibnobi is not just a project, it's also a way of life, a community, Shibnobi is actually leading the charge.

Disclaimer

Information contained in this white paper is subject to completion or amendment. This white paper shall not constitute an offer to sell or the solicitation of any offer to buy tokens nor shall there be any sale of such tokens in any jurisdiction in which such offer, solicitation or sale would be unlawful. This white paper supersedes in its entirety any other prior marketing materials or other communications.

Certain information set forth in this white paper contains “Forward-looking information”, including “future oriented financial information” and “financial outlook”, under applicable securities laws (collectively referred to herein as forward-looking statements). Except for statements of historical fact, information contained herein constitutes forward-looking statements and includes, but is not limited to, the: (i) projected financial performance of the token; (ii) completion of, and the use of proceeds from the potential sale of securities; (i) the expected development of the organisation, projects and joint ventures; (iv) execution of the founder’s vision and growth strategy; (v) completion of the organisation’s projects that are currently underway, in development or otherwise under consideration; and (vi) future liquidity, working capital, and capital requirements.

Forward-looking statements are provided to allow potential token holders the opportunity to understand core team’s beliefs and opinions in respect of the future so that they may use such beliefs and opinions as one factor in evaluating the project. These statements are not guarantees of future performance and undue reliance should not be placed on them. Such forward-looking statements necessarily involve known and unknown risks and uncertainties, which may cause actual performance and financial results in future periods to differ materially from any projections of future performance or result expressed or implied by such forward-looking statements. Although forward-looking statements contained in this white paper are based upon what core team of the organisation believe are reasonable assumptions, there can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements.

The individuals responsible for creating the token and platform(s) undertake no obligation to update forward-looking statements if circumstances or core teams estimates or opinions should change except as required by applicable securities laws. The reader is cautioned not to place undue reliance on forward-looking statements.

Shibnobi's Vision

Shibnobi, Inc. is a Texas incorporated company which was founded in order to increase the safety of new and existing users and participants within the cryptocurrency and blockchain industry as it continues to grow and reach record levels of adoption every year. Shibnobi, both through its actions as a blockchain company and through the utility that it will offer aims to dramatically improve this through the creation of real-world accountability of projects and their owners with whom Shibnobi will partner with by exercising KYC / KYB ("know your customer" / "know your business") practises and minimum acceptable operating standards, including measures that will effectively remove anonymity, by which listed ecosystem participants must abide.

Shibnobi strongly believes that by creating strong utility within its ecosystem for its end users in particular, it will drive sentiment and user adoption that would incentivize projects to join the Shibnobi ecosystem. This virtuous cycle will then create additional accountability and drive informative decision making which will result in a safer and stronger community, where fraudsters and scammers will not be able to operate.

In order to create the demand generation and influence that Shibnobi envisions, it first plans to focus on the creation of core components of decentralised finance, namely a swap utility (DojoSwap); a multi-factor authentication EVM ("Ethereum Virtual Machine") compatible wallet (Shibnobi Wallet) and finally a secured proof of stake EVM blockchain (Shibnobi Blockchain) which will be explained further in this document. Once these core components are put in place and the incentivization of the Shibnobi ecosystem increases through its utility, Shibnobi will then launch its metaverse (DojoVerse) which will further gamify the ecosystem and lead to additional partnerships and value to its ecosystem participants.

Shibnobi believes strongly in its vision and has been leading from the front since its inception through near-daily community video conferences and transparent communication on all topics, and will continue to do so until its mission is achieved.

Shibnobi SHINJA as a Cryptocurrency

Shibnobi has created an open source cryptocurrency token, SHINJA, which is a general purpose cryptocurrency for use in everyday digital platform services within the Shibnobi ecosystem such as enablement of premium features and functions within its ecosystem tooling, and will also be the base unit of all economic transactions within the Shibnobi ecosystem, including its subsystems and eventual metaverse.

In character, SHINJA is a pure cryptocurrency of a fixed supply which is non-inflationary and fractionally divisible. As with all cryptocurrencies, units of SHINJA are fungible and transferable and they will be expected to trade on cryptocurrency centralised and decentralised exchanges. SHINJA is not to be considered as an investment of any kind, and Shibnobi provides no guarantee or promise of current or future value.

The existing Shibnobi SHINJA token has been created on the Ethereum ERC20 protocol which apart from its mature development environment which is geared towards the creation of trustless smart contracts which are required for the Shibnobi platform to operate, it further enables access to the largest EVM wallet user base which will eventually be incentivized to bridge their token into the native Shibnobi Blockchain coin with very little complexity.

Creation of the Ecosystem

Community Engagement

Today, Shibnobi can engage with a community of over 200,000 individual accounts across its social media channels on Facebook, Twitter, YouTube, Telegram, Discord and Reddit with over 20 international communities across the world.

Shibnobi strongly believes in community engagement and transparency and dedicates significant effort to consistently grow this pillar of our ecosystem.

By creating a strong ecosystem based on trust, transparency and fairness, we expect that our growing community will exert this influence into other projects which in time aids in the achievement of the core mission.

Ventures

Shibnobi engages with various firms and companies to further increase the utility of its token. As a showcase of this utility, we will describe our interaction with a premium partner with which we are currently engaged.

“Shibnobi Gaming”, a result of one of these ventures, is an example where Shibnobi has brought in the expertise of a team which has a wealth of experience in the creation of skills-based wagering platforms. Shibnobi believes that adding new verticals such as this will further improve and add value to our community within the ecosystem.

This new platform, “Shibnobi Gaming”, is an esports skills based wagering platform, plans to utilise SHINJA as the economic unit within its platform. “Shibnobi Gaming” provides an automated friendly wagering platform that enables gaming opponents to place wagers on the winner of a particular game or round, such as League of Legends which will use SHINJA as the primary wager unit. In addition to the provision of its utility token, Shibnobi will participate in the partnership through marketing activities and advisory services which will allow for ‘Shibnobi Gaming’ to continue its focus on the creation of an excellent product, whilst increasing the popularity of the SHINJA utility token through their platform.

Creation of the Ecosystem^(cont)

The Ecosystem

As described above, Shibnobi will be creating an ecosystem within which many utilities will be created. These platforms, mentioned below, will effectively form a part of a greater platform where the interoperability between these tools will enhance the overall security of our user base and enhanced usability over time which will allow for inexperienced cryptocurrency and blockchain enthusiasts to have a safer and more enjoyable experience into this exciting industry.

Shibnobi DojoSwap

DojoSwap is the first product from Shibnobi that is expected to be completed within Q1 2022. Dojoswap has been created to address the lack of user-friendly tools across EVM-compatible networks in the DeFi ecosystem. DojoSwap will be built on a decentralised AMM (“Automated Market Maker”) system leveraging liquidity pools powered by users to enable seamless cryptocurrency trades across multiple chains.

This swap DEX (“decentralised exchange”) will be released in phases and will have continuous improvement over time. The initial release will be a straightforward swap platform which will allow for trades on Ethereum, BSC and Polygon. This initial release will form the base of the DEX platform, after which additional functionality and features will be created that will benefit users. These features will follow a freemium model, where in order to access advanced features or quality of life upgrades, the user will need to hold the SHINJA utility token within their wallet.

Additional features that will be released include the following:

Charting and graphs

Free tiers will allow for limited concurrent tabs, favourites, additional banner adverts or call to actions.

Quality of life upgrades will be unlocked in accordance with a tiered holding model, which will reduce restrictions and increase limits, etc.

Creation of the Ecosystem^(cont)

Shibnobi DojoSwap^(cont)

On-chain analytics

Free tier will allow for basic transaction information which is readily available through direct interaction with blockchain.

Premium tiers will allow for increased data analytics that will provide proprietary information from data services offered by Shibnobi, including features such as personal and third party wallet tracking, whale tracking, influencer data, etc.

Standard / advanced trading

Free tier will allow for standard DEX trading.

Premium will allow for advanced features, such as buy and sell orders, limit and stop loss trading, etc.

Staking

Staking will incorporate tiered limits for participation which will require that a certain amount of SHINJA is either directly staked or held in the users wallet in order to access staking of higher value. This is a quality of life improvement as the staking party would be able to move tokens and stake from multiple wallets.

As the ecosystem evolves Shibnobi will continually create additional premium features and products which will further increase the use of the SHINJA token within the ecosystem. Further, DojoSwap will be the primary swap platform for the Shibnobi blockchain.

Creation of the Ecosystem^(cont)

Shibnobi Wallet

The Shibnobi wallet has a pending delivery timeline of the end of Q2 2022 and will be a EVM-compatible wallet which will include multi-factor authentication via their mobile phone which will assist in the security of users' cryptocurrencies.

Shibnobi plans to add features within the wallet in the same freemium model above based on staked or wallet-bound tokens which include utilities such as:

- Cryptocurrency portfolio tracking which will enable users to track their entire cryptocurrency holdings.
- Token intelligence, which will include token static analysis, honeypot analysis and more, to enable more informative decisions to be taken in real time by the user.
- Influencer and hype intelligence, which will demonstrate whether or not the token being investigated is being overly (or underly) advertised according to social media data.

A wallet is one of the core foundations of the blockchain space, and Shibnobi believes that a great amount of value can be created for users within this area, and will invest resources here to ensure it captures and provides this value accordingly.

Creation of the Ecosystem^(cont)

Shibnobi Blockchain

Blockchain technology is built on the basis of immutability and cryptographic security of transactions, and although it does this incredibly well, it has not solved the issue of fraudsters and scamsters leveraging these blockchain networks for nefarious purposes.

The Shibnobi blockchain, which is expected to be launched by the end of Q3 2022, aims to solve this problem through the additional due diligence of all token creators as well as through advanced security enhancements that will aid in the detection and prevention of fraudulent tokens. Further, the Shibnobi Blockchain will increase transaction speeds whilst reducing gas fees - something which is currently a major barrier to mass market DEX adoption within the Ethereum network.

Shibnobi coin in this case is the transactional unit that facilitates all Shibnobi blockchain transactions, and would be required for all interactions which require computation by network participants. As an analogy, if Shibnobi Blockchain were a car, then Shibnobi coin would be the fuel for the car.

Shibnobi Blockchain will require validators in order to provide block consensus, and therefore Shibnobi is looking into the possibility of providing third-party staked validator nodes which will be provided with incentives for forming a part of the validator network of the blockchain protocol. This will provide additional utility to both the SHINJA token and coin as the staked (locked) SHINJA would provide a direct service to the blockchain network by providing network resilience through the decentralisation of block validation.

Shibnobi is currently working closely with senior engineers, including from reputable companies such as Certik, in order to ensure the security and success of this project.

Creation of the Ecosystem^(cont)

Shibnobi Dojoverse and NFTs

The Shibnobi Dojoverse, a project spanning into 2023, is a metaverse within which the Shibnobi community will be able to access as holders of the underlying SHINJA token and will operate with the inclusion of a variety of NFTs (“non-fungible token”), which provide ownership and utility within the metaverse that has been created.

The feudal Japan themed Shibnobi metaverse is expected to be expanded into a full virtual reality experience, allowing access to its ecosystem tooling in fun and gamified ways. As an example, Shibnobi will be allowing for staking solutions, and these will be accessible and visualised virtually within its metaverse as a “paddy field”. Shibnobi Gaming will be accessible via a wager house where friends can meet virtually together to watch the games together, and far more.

Dojoverse will further incorporate smart NFTs to create a world where possession of these various NFTs will allow for engagement and benefits within the virtual world. Currently there are four NFT categories expected:

- Genesis NFTs representing leaders (Shogun / Jonin / Shinobi etc.)
- Character NFTs (Warriors, Creators, Commercial and subclasses)
- Ownable NFTs (Virtual housing, armour, animals, tools, etc.)
- Attribute NFTs (Regionality, cosmetic effects etc.)

Dojoverse will provide interconnection of these NFTs to their owners to create a self-governed virtual world where SHINJA is the economic unit within the Dojoverse in order for the virtual world to operate.

As a worked example, Shibnobi will allow for a leader to create factions within which they will be able to recruit additional Dojoverse participants to join via a “dowry”. The leader would be able to claim settlements which will need to be defended from other leader classes, which will provide access to certain facilities with benefits for the holders, such as additional army health, attack or defence for war, or an additional percentage yield on a rare, staked “paddy field”, or by receiving a virtual prize for providing access to certain facilities they currently control.

Creation of the Ecosystem^(cont)

Shibnobi Dojoverse and NFTs^(cont)

In terms of how the above example would work:

- The leader is a limited edition, rare genesis NFT.
- The Dojoverse participants will own a character NFT and can follow a leader by staking SHINJA to their cause as the dowry, becoming subjects of the leader.
- A leader can purchase certain premium virtual settlements with SHINJA. These settlements will contain benefits, such as stat-boosts or increasing staking yield, etc. which the leader will either bestow to their subjects or open to the wider Dojoverse for a price (paid or earned in SHINJA within the virtual metaverse). These settlements can be attacked, and also require maintenance over time or they will decay. These events require SHINJA to perform repairs and maintenance in order to retain control of the settlement.

Shibnobi believes that the gamification of platform utilities and the creation digital economies utilising publicly traceable cryptocurrency tokens to will become more common over time as the creation of true decentralised metaverses are becoming more possible, justifying the exploration into this new and exciting vertical within the industry.

In Conclusion

Shibnobi Inc, and its founders, Cliff and Luke, believe strongly in its vision, and that the network effect of its community will drive a real change in the industry through its approach mentioned within this whitepaper.

Shibnobi is proud to be working alongside such an incredible community in order to make a better cryptocurrency space and will continue to lead with transparency and accountability, providing information and updates to its community every step of the way whilst developing this new ecosystem with a global network focused on the betterment of the space.
